WEB OBJECT WIZARD Community Edition 7.0 Released   [FREE]

San Diego, CA.
October, 11, 2011 -

PRESS RELEASE
PlanetJ releases WOW Community Edition 7.0 – Free

WOW Community Edition (WOW CE) is the newest member of PlanetJ's award winning web based rapid application development family of products and is available free of charge. WOW CE allows IBM i developers the ability to create feature-rich web based applications in minutes without lengthy and expensive manual coding.

WOW developers use a "point and click" approach to identify their database files and WOW instantly generates the application including features such as dynamic prompting, summary to detail drill downs, and single click export to Microsoft® Excel. WOW's hot deployment technology makes applications available to users via a simple URL.

Long time IBM tools executive John Quarantello wrote, "PlanetJ's webinar on WOW was one of the best presentations and demos I've seen from an iSeries Tools partner". WOW is IBM Server Proven and executes on top of Apache Tomcat or IBM® WebSphere. With the ability to create applications in as little as 5 minutes, hundreds of WOW powered applications have already been developed and deployed.

Along with video tutorials and comprehensive documentation provided by PlanetJ, users will be able to modernize and create new IBM i web applications that leverage their existing databases and RPG programming skills. WOW developers can also build applications that access information stored in MySQL, Microsoft® Sequel Server, Oracle® or any other JDBC compliant databases.

 "It is our goal to help all IBM i businesses to modernize and develop leading edge applications that utilize their existing investments in the IBM® i. With WOW CE customers are able to do just that that at no cost today." ~Paul Holm, WOW Product Architect, PlanetJ Corporation.

To get started, users can view a 20 minute demonstration video at: http://www.youtube.com/watch?v=VHIvHzUeh_Y
